Common Chatting Web Application
Group-20

What is Common Chatting Web Application ?

This is online website based on Gmail API where we can collaborate and share official information.
This can be useful for academic , commercial, Community etc.

Objective : Official communication information !!

We don't have all information of the official communication   in varies medium like Gmail, letter, meeting etc .
Which is we want to know and have also suggestion and will be helpful information.

How ?

We have created a website where we can send any information to authored person and collaborate with everybody which is part an organization.

All information will be reside on the web server and Those people which have register on this application can see this information.
